

ARC NETWORK GRANT
MAY 2026

LiftUp Money

The stablecoin liquidity & loyalty layer built natively for
Arc.

LIFTUP.MONEY

USDC · EURC · CIRBTC

ARC TESTNET LIVE

6 CIRCLE PRODUCTS INTEGRATED

PHASE 1 · PRE-MAINNET

PROBLEM

Stablecoin liquidity on Arc is **fragmented**.

Arc was built for stablecoins, but the venues above it ship generic AMM designs, leave EURC underserved, and offer no retention loop for the wallets they capture.

01

EURC has almost no on-chain liquidity

USDC dominates every Circle chain. EURC stays aspirational without a deep USDC→EURC venue on Arc.

02

No retention loop for stablecoin users

Generic AMMs treat every swap as transactional. Wallets churn to wherever gas is cheapest — Arc-native loyalty must be engineered, not assumed.

03

cirBTC needs real venues, not just a contract

Circle Wrapped BTC only matters if there are markets for it. Most Arc venues haven't listed it — LiftUp shipped two cirBTC pairs the day it went live.

→ *Arc needs a stablecoin liquidity layer, not another generic AMM.*

Pro-rata accrual + instant cashback.

A multi-currency AMM (USDC / EURC / cirBTC) where every fee flows through Lift Engine — a pro-rata distribution layer with per-swap cashback and a claim mechanism. Zero random selection. Zero gambling-coded mechanics. Loyalty rewarded by deterministic weight.

Instant cashback per swap

Every swap returns ~0.027% of volume as cashback, accrued immediately to the swapper. Effective fee for traders $\approx 0.023\%$ (vs nominal 0.05%) — competitive with any DEX on Arc.

Loyalty-weighted LP accrual

Weekly + monthly buckets distribute pro-rata weighted by conviction tier $\times$ tenure $\times$ launch boost (up to 1.95 $\times$). Trust gate: 24h hold filters hot-money farming. Mid/whale LPs concentrate naturally.

Claim, not lottery

User-pulled `claim()` drains accrued balance across all cadences + tokens. Sub-cent gas on Arc. 5-bucket split (10/31.5/31.5/22.5/4.5) hardcoded — owner cannot redirect rewards.

Already live on **Arc Testnet**.

7 routes · mobile-responsive · Reown wallet · ArcScan-verified contracts · liftup.money

/ SWAP

Dual-route swap with circuit breaker

LiftUp Pool 0.05% vs Circle App Kit 10bps. UI auto-routes to Circle when pool drift > 10%.

Quote panel: 1 USDC → 0.955 EURC
LiftUp Pool · Earns loyalty weight

/ BRIDGE

USDC across 5 chains

Circle Bridge Kit + CCTP v2. ~13-second settlement Arc ↔ ETH / Base / Arbitrum.

5 USDC · Arc → ETH Sepolia
CCTP v2 fast · ~13 s

/ LIQUIDITY

Add LP at live FX-grade rate

Pool ratio auto-matches CoinGecko EURC spot. Keeper bot rebalances every 4 h.

10 USDC + 8.6 EURC
Pool TVL · auto-tracked

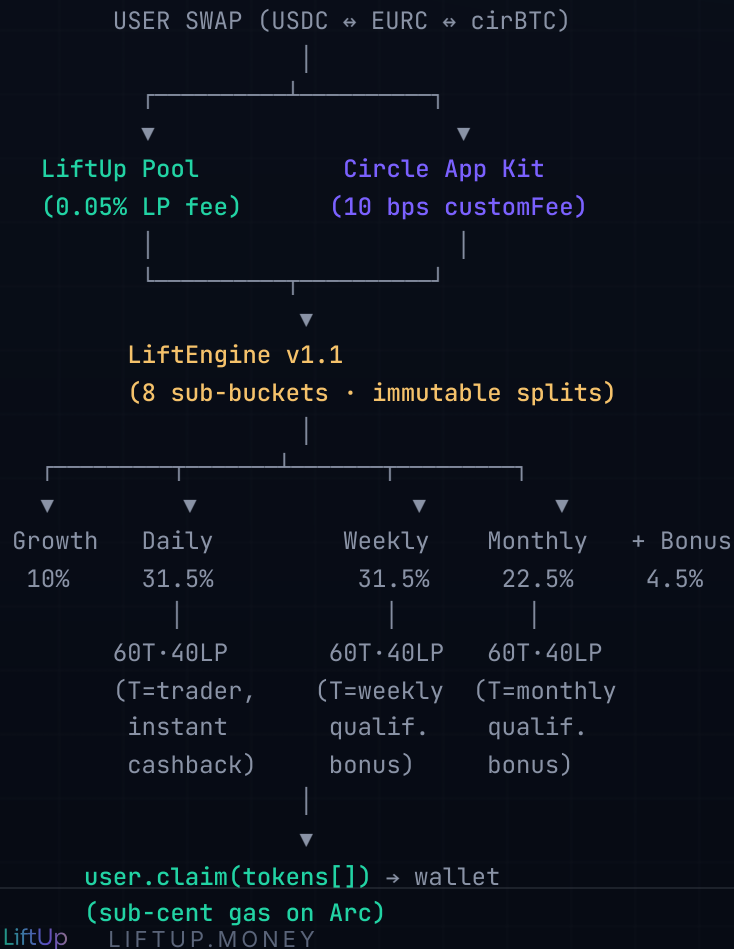

/ REWARD

Treasury · public · immutable

RewardDistributor address one-click copy. 5-bucket split visualized. FAQ accordion.

10 / 31.5 / 31.5 / 22.5 / 4.5
Contract constants · cannot change

Every dollar of fee is **accountable**.

Pure pro-rata, zero RNG

Lift Engine accrues by deterministic weight (LP share × tier × tenure). No lottery, no random selection — every distribution reproducible from public events.

8 sub-buckets, no order dependency

Each cadence bucket splits 60/40 trader/LP into independent sub-buckets. Trader and LP accruals cannot interfere.

Bounded owner config

Bucket weights + tier/tenure multipliers = immutable. Per-pair launch boost owner-set ≤ 2.0×, ≤ 30 days, finalized after first set.

Claim, not push

Accrued balance persists indefinitely; user-pulled claim pays sub-cent gas. No stranded funds, no failed transfers.

Built on Circle's stablecoin stack.

6 Circle products live today. 2 more on the roadmap. We don't just deploy on Arc — we route every swap through Circle's infrastructure.

CIRCLE PRODUCT	HOW LIFTUP USES IT	STATUS
USDC	Native gas + base side of every swap pair	✓ Live
EURC	Paired with USDC and cirBTC — one of the few real EURC liquidity venues on any Circle chain	✓ Live
cirBTC	Circle Wrapped BTC paired against both USDC and EURC — shipped within days of token going live on Arc	✓ Live
App Kit	Alternative swap engine with our 10 bps customFee → on-chain distributor	✓ Live
Bridge Kit	UI for cross-chain USDC transfers	✓ Live
CCTP v1 / v2	Burn-and-mint USDC: Arc ↔ ETH, Base, Arbitrum	✓ Live
Paymaster	Sponsor gas for first 3 swaps per new wallet — onboarding loop fix	 Q3 2026
Wallets	Embedded non-custodial flow for retail users with no DeFi history	 Q4 2026

Arc's **stablecoin liquidity layer.**

Arc was built for stablecoins — so was LiftUp

USDC is the native gas token. EURC is first-class. cirBTC is the newest piece of Circle's on-chain product line. LiftUp ships pairs in all three on day one — no other protocol on Arc has the same coverage.

EURC needs a home, and Arc is the obvious one

Real EURC liquidity exists almost nowhere. The cheapest, fastest way to make EURC matter is a venue on Arc that treats it as a first-class asset — not an afterthought pair.

No protocol token, no governance theater

There is no LIFT token. No airdrop. No bribe market. Fees fund users directly — uncommon in DeFi and uniquely aligned with the Arc + Circle "real adoption, not speculation" thesis.

Alignment with Arc's ethos

Splits hardcoded as contract constants. All distributions emit on-chain events. Every cron log is public. Arc's transparency push, extended to application-level economics.

What we shipped **before** asking for a single dollar.

CRON WORKFLOWS

1

KEEPER BOT RUNNING

✓ 100% open source · private repo, available to reviewers

✓ Zero mutable owner powers on the distributor

✓ Stateless circuit breaker · no admin override

✓ Multi-source rate feed · CoinGecko + Coinbase + Frankfurter

Testnet TVL: ~\$100 (founder bootstrap) → scaling to \$5k+ in the next 14 days via faucet campaign. We have intentionally *not* chased testnet vanity metrics. Phase 1 = ship the system.

Testnet → Mainnet → Aggregator-listed.

Phase 1 ✓

May 2026

- 6 verified contracts, 3 live pairs
- 6 Circle products live (incl. cirBTC)
- UI at [liftup.money](#)
- Auto-rebalance bot · 3-tier safety

Phase 2

Q3 2026 · 0-90 d

- Audit LiftEngine.sol v1.1 (\$15k grant)
- Migrate factory.feeTo → LiftEngine (no LP disruption)
- Arc Mainnet launch (3 pairs)
- Whitepaper + open source

Phase 3

Q4 2026 · 90-180 d

- EURC cross-border corridor (payroll / remittance widget)
- Aggregator listings (1inch / Paraswap)
- Circle Paymaster integration
- \$250k mainnet TVL target

Phase 4

Q1 2027 · 180+ d

- Circle Wallets + Unified Balance
- Activate bonus reserve program
- x402 agentic surface (machine-readable quote API)
- Additional Circle assets within 1 week of launch

Day-180 mainnet target · \$250k TVL · 200+ unique LPs · \$50k weekly swap volume

Built lean. Asking lean.

TEAM

DO THI NGOC ANH

Founder · Full-stack engineer

- 2 years of experience as a full-stack developer
- GitHub: github.com/anhdopc
- Shipped products

The entire stack — contracts, frontend, off-chain bot, brand, docs — built and deployed to Arc Testnet in 6 weeks. Solo or small-team velocity.

GRANT ASK

\$15,000

Single line item · audit-only · 1 tranche

Independent smart-contract audit	\$15,000
----------------------------------	----------

Total	\$15,000
--------------	-----------------

Sherlock Watson contest (~\$15k) *or* Trail of Bits Lite (~\$12k + \$3k bug-bounty seed). Covers AMM + Router + RewardDistributor.

T1 \$15k on signed audit engagement letter — funds flow directly to audit firm where possible.

Why audit-only: liquidity seed, EURC corridor, marketing and ops are team-funded. Audit is the one line item that requires independence. Sized to Cohort 1 average (\$10.6k/project).
